about axiom rail

Axiom Rail is a company with an outstanding pedigree. One that provides a fresh alternative for customers in rolling stock services through maintenance, refurbishment, rail components and suspension systems.

Axiom Rail provides a complete rolling stock service and, uniquely, is a company with a UK network of facilities supporting rolling stock operations.

Axiom Rail is a provider of engineering solutions for rolling stock, offering an all-encompassing package from design and production through to approval and installation.

Axiom Rail is a supplier of innovative and adaptable rail freight suspension systems, approved for use in the UK, Europe and Nordic countries.

Axiom Rail has presence in Europe and Asia with the ability to operate throughout Europe, offering complete geographic flexibility.

Axiom Rail has an outstanding railway pedigree and is a company providing honest engineering solutions drawn from a rich range of experience.

axiom rail | maintenance

Axiom Rail offers maintenance and services support to customers who operate rolling stock for freight operations. All maintenance activities can be facilitated including inspection, repair and modifications.

Axiom Rail welcomes the opportunity to liaise with customers to offer an intelligent customised maintenance solution that is safety compliant and meets the operational requirements of an industry that demands high performance.

axiom rail | refurbishment

Axiom Rail provides overhaul, modification, repair, and livery services for rolling stock and major components. The company has a strong record of achievement in overhauling freight wagons, alongside modification and bespoke solutions.

Axiom Rail offers all-encompassing packages from design to production through to approval and installation. Extensive design and engineering capability, enabling complete solutions from concept design to supply and installation, are provided.

axiom rail | components

Axiom Rail offers a wide range of components to support the activities of its customer base. We are able to provide wheel sizes from 500mm dia to 1400mm dia and axles compliant with European Standards such as EN13261/2 and meet TSI requirements. With access to an annual capacity of up to 1,000,000 wheels and 500,000 axles, Axiom Rail is able to achieve stringent delivery requirements.

In support of the growing numbers of Axiom Rail suspension systems now in traffic, we are able to offer a fully flexible repair and maintenance service as well as individual new component supply.

axiom rail | suspension systems

Axiom Rail is a supplier of innovative, adaptable rail freight bogies and suspension systems that are able to operate throughout the UK, Europe and Nordic regions.

Axiom Rail offers a complete range of products displaying unique qualities that make rail freight more efficient, economical, safe and enhances its environmental credentials. The Axiom Rail product range includes the TF25, TF25E and AMIII bogies, as well as the TF25SA single axle suspensions. Systems are able to meet axle loads of up to 30 tonnes and speeds of up to 160 kph. We are also able to offer a broad gauge solution that is fully approved to operate within Finland.

A full after sales service is provided, including the supply of spares, maintenance and technical support.
